

Trencadis

Android Developer

București

We are looking for a smart and talented Android developer to join our team.

Responsibilities:

- Providing well-informed, experienced engineering direction for the design, architecture, and implementation of complex features from the ground up.
- Involvement with technical tasks and contribution to the overall development process including User Experience, assessment of requirements, architectural decisions and more.
- Working in cross-functional feature teams with lots of people from different backgrounds. Character counts here and we hope you value a friendly work environment just as much as we do.
- Follow agile methodologies to continuously improve our Android app.
- Help our team to develop amazing user experiences for mobile.
- Identify and share your knowledge of state-of-the-art technologies that will help us innovate faster.

Skills & Requirements:

- University degree in computer science or similar education.
- You've been passionately developing applications using Android API for a minimum of 3 years and have expert knowledge of Java.
- Deep understanding of Android SDK and Java.
- Knowledge of current trends in software design, architecture and web services (especially REST).
- Experience using modern version control systems such as Git.
- You're able to share what you know and bring the team to a higher level of technical performance.
- You have a passion for writing clean, reusable, well-documented code in Android.
- Excellent technical communication, analysis, and problem solving skills.
- Familiarity with modern development methods and instruments, as well as test-driven development.
- Fluent communication in English.
